A question has been given in this question and a statement related to it. Read the passage carefully and review

the statement based on it.

Officials said on Thursday that the Punjab government, together with the WWF-India, is planning to make their planned population for the first time in order to conserve one of the world's rarest mammals - Dolphin found in the Indus river. It is found only in some areas of India and Pakistan. In India, it is found only in the area of 185 km in the river Vishya from Talwara to diamond barrage around Punjab. Two teams of forest department, wildlife conservation, Punjab and officials of Punjab and WWF-India will collect data of the Dolphin population in five days workshops.

According to Suresh Babu, director of river, wet land and water policy in WWF-India, the largest population of Indus Dolphin, the Pallonista gangtika, is of minor populations, which is found throughout Pakistan. There are approximately 1800 in the area of approx 1500 km of Indhu river. According to him, "If there is enough water and stream water in the river, then dolphins will be found there, if not, the Sutlej is an example." Experts say that they were found decades before in Satluj, but in the rivers surrounding rivers, Incoming pollution caused the cause of their extinction. Suresh Babu told IANS that this species of Dolphins is visually impaired and circulates on the basis of resonance like bats. This species of dolphin is one of seven species of dolphin found in fresh water all over the world.

Statement: Besides the Sindhu dolphin, seven freshwater dolphins are found in the world.

Select the most suitable option below.

A-statement is absolutely true.

B-Query is probably true.

C-statement can not be reviewed.

D-statement is completely false.
