Read the passage to answer questions.

The nature versus nurture debate is about which part of a person is more important—their inherited qualities, which includes genes, or their personal experiences and the way they were brought up. For years, scientists have tried to find out what causes people to have different personalities, behaviours, and characteristics.

The nature versus nurture debate poses a very complicated scientific question: how do scientists figure out which one plays a greater role in the development of a person? Many scientists study twins that have separated at birth to answer this research question. Scientists use twins because they have identical genes, so it makes it easier to observe the effect of a person's environment. Do you think twins raised in different homes will grow up to have the same personalities? The view that humans acquire all or almost all of their behavioral traits from "nurture" was termed tabula rasa, Latin for "blank slate," by philosopher John Locke. This idea proposes that humans develop only from environmental influences. One example of a person's trait that is completely determined by their environment is native language. Studies show that children, regardless of where they're born, can learn any language with equal facility.

The term "nurture" has historically been defined as the care given to children by the parents, with the mother playing an important role. Now, this term is regarded by some as the environmental (non-genetic) factor of a person's environment. This new definition of "nurture" has been expanded to include, not just a person's family upbringing, but also everything else they experience in daily life including advertisements, media, education, peer influences, and home environments.

Some scientists have concluded that a person's nature—meaning the traits they got from their parents—have more power in determining a person's identity than how they are nurtured, or raised. Inherited traits are traits that are developed before birth.

Some genetic traits are highly heritable, such as eye color. Some disorders or diseases are also heritable. However, environments are still influential in how that disease affects a person's life; for example, people who are born with a disease may live a long time depending on how they are cared for. There are also some non-genetic factors that are highly heritable. For example, a wealth and social status are two non-genetic factors that are generally passed down from family.

Some people criticize the whole concept of "nature versus nurture." They claim that it is an overly simple way to think about a person's identity. Perhaps the answer is not as simple. Are there other factors beyond genes and environment that make us who we are?

Read the passage and answer the following questions:

When 12 young footballers and their coach entered the Tham Luang Nang Non cave in Thailand, it was supposed to be a fun outing after football practice. But when a torrent of flood water rushed in after heavy rain, the group became trapped on a small rock shelf deep inside the cave's vast network of tunnels.

It was nine days before two British divers, John Volanthen and Richard Stanton, located the group — mercifully alive and apparently in good physical and mental health. But how do people cope with such life-threatening events? And why is it important to focus on psychological, as well as physiological impact?

When the boys first became aware that they were facing a lifethreatening situation they would have experienced a number of physiological reactions. Fight or flight responses, such as an increase in heart rate, would have kicked in immediately, designed to help us stay alive.

But despite their physiological benefits, these neurochemical changes can affect our brain, and impair our mental functioning. During the initial stages of an emergency situation our brains may perform poorly, potentially resulting in poor decision-making and memory failures. Fortunately, when the flood waters came crashing in, the Thai footballers and coach appear to have remained level headed. They were able to control feelings of panic, and made the rational decision to find a safe place and wait.

As the immediate danger from the flood waters receded, more long-term survival needs will have come into focus. Everyone knows that the human body has basic physical requirement: an adequate supply of food, water and warmth. What people often forget is that brain function is also sensitive to environmental factors. When exposed to the elements, dehydrated, hungry, or suffering from sleep deprivation, the human brain cannot function within its normal operating parameters.

In these conditions people can make poor decisions which can put them at risk. The Thai footballers seem to have managed to keep themselves hydrated, and although they were clearly hungry when they were found, they appeared cognitively intact, looking alert and asking appropriate questions. Again, this shows that the boys and their coach managed to stay both physically and psychologically healthy during the nine long days they spent waiting in the dark.

In a survival situation, your mental health is just as important as your physical health. Maintaining a positive attitude is crucial: people who remain optimistic are more likely to think that adverse events are controllable, and so are more likely to undertake positive behaviours to try and survive. Pessimistic thinking increases feelings of anxiety and helplessness, which can stop people from trying to proactively improve their situation.

In extreme cases, people can give up mentally, withdraw into themselves, and even die. This is known as psychogenic death, essentially giving up. From the early footage, the footballers seem to have managed to stay positive while awaiting rescue. They are seen laughing and joking with the divers — a very promising sign.

Another way to maintain mental strength is to draw on any social support available in the situation. The fact that the Thai footballers have been able to draw on each other through their ordeal will have been a big boost to their mental health.

Question Label: Comprehension

Read the passage and answer the following questions:

When 12 young footballers and their coach entered the Tham Luang Nang Non cave in Thailand, it was supposed to be a fun outing after football practice. But when a torrent of flood water rushed in after heavy rain, the group became trapped on a small rock shelf deep inside the cave's vast network of tunnels.

It was nine days before two British divers, John Volanthen and Richard Stanton, located the group – mercifully alive and apparently in good physical and mental health. But how do people cope with such life-threatening events? And why is it important to focus on psychological, as well as physiological impact?

When the boys first became aware that they were facing a life-threatening situation they would have experienced a number of physiological reactions. Fight or flight responses, such as an increase in heart rate, would have kicked in immediately, designed to help us stay alive.

But despite their physiological benefits, these neurochemical changes can affect our brain, and impair our mental functioning. During the initial stages of an emergency situation our brains may perform poorly, potentially resulting in poor decision-making and memory failures. Fortunately, when the flood waters came crashing in, the Thai footballers and coach appear to have remained level headed. They were able to control feelings of panic, and made the rational decision to find a safe place and wait.

As the immediate danger from the flood waters receded, more long-term survival needs will have come into focus. Everyone knows that the human body has basic physical requirement: an adequate supply of food, water and warmth. What people often forget is that brain function is also sensitive to environmental factors. When exposed to the elements, dehydrated, hungry, or suffering from sleep deprivation, the human brain cannot function within its normal operating parameters.

In these conditions people can make poor decisions which can put them at risk. The Thai footballers seem to have managed to keep themselves hydrated, and although they were clearly hungry when they were found, they appeared cognitively intact, looking alert and asking appropriate questions. Again, this shows that the boys and their coach managed to stay both physically and psychologically healthy during the nine long days they spent waiting in the dark. In a survival situation, your mental health is just as important as your physical health. Maintaining a positive attitude is crucial: people who remain optimistic are more likely to think that adverse events are controllable, and so are more likely to undertake positive behaviours to try and survive. Pessimistic thinking increases feelings of anxiety and helplessness, which can stop people from trying to proactively improve their situation.

In extreme cases, people can give up mentally, withdraw into themselves, and even die. This is known as psychogenic death, essentially giving up. From the early footage, the footballers seem to have managed to stay positive while awaiting rescue. They are seen laughing and joking with the divers — a very promising sign.

Another way to maintain mental strength is to draw on any social support available in the situation. The fact that the Thai footballers have been able to draw on each other through their ordeal will have been a big boost to their mental health.

पुस्तक समीक्षाओं के अतिरिक्त बालकृष्ण भट्ट ने अपनी पत्रिका 'हिन्दी प्रदीप' में
'साहित्य जनसमूह के हृदय का विकास है' शीर्षक से निबंध लिखा और साहित्य को
जनसमूह से जोड़कर रीतिवादी कविता के विरुद्ध आलोचना की। जनसमूह के हृदय से
जुड़कर ही रीतिवाद विरोधी अभियान की शुरुआत होती है जिसके महत्वपूर्ण सूत्रधार
आचार्य महावीर प्रसाद द्विवेदी और रामचंद्र शुक्ल हैं। इसके अतिरिक्त 'सच्ची कविता'
शीर्षक निबंध में भट्ट जी ने कविता के नये आयामों की व्याख्या की और रीतिकालीन
प्रवृत्ति से उसे मुक्त करने का प्रयास किया। बालकृष्ण भट्ट की यह आलोचना दृष्टि हिन्दी
में एक नवीन आलोचकीय दृष्टि का सूत्रपात करती है। भारतेंदु युग के आलोचकों में
बालकृष्ण भट्ट की भूमिका अधिक महत्वपूर्ण थी। भारतेंदु युग में आलोचना का विकास
मुख्य रूप से पत्र-पत्रिकाओं में प्रकाशित होने वाले निबंधों और पुस्तकों की समीक्षाओं
से होता है जो हिन्दी आलोचना की पृष्ठभूमि का मार्ग प्रशस्त करती है।
