Question Numbers : (156 to 160)

Read the following information carefully and answer the given questions.

Archaeology as a profession faces two major problems. First, it is the poorest of the poor. Only paltry sums are available for excavating and even less is available for publishing the results and preserving sites once excavated. Yet archaeologists deal with priceless objects every day. Second, there is the problem of illegal excavation, resulting in museum quality pieces being sold to the highest bidder. I would like to make an outrageous suggestion that would at one stroke provide funds for archaeology and reduce the amount of illegal digging. I would propose that scientific archaeological expeditions and governmental authorities sell excavated artifacts in the open market. You might object that professionals excavate to acquire knowledge or money. Moreover, ancient artifacts are part of our global cultural heritage, which should be available for all to appreciate, not sold to the highest bidder. Sell nothing that has unique artistic merit or scientific value. But, you might reply, everything that comes out of the ground has a scientific value. Theoretically, you may be correct in claiming that every artifact has a potential scientific value. The basement of museums is simply not large enough to store the artifacts that are likely to be discovered in the future. There is not enough money even to catalogue the finds, as a result, they cannot be found again and become as inaccessible as if they had never been discovered. Indeed, with the help of a computer. some artifacts could be more accessible than are the pieces stored in bulging museum basements. Prior to sale, each could be photographed and the list of the purchasers could be maintained on the computer. A purchaser could even be required to agree to return the piece if it should become needed for scientific purposes.

It would be unrealistic to suggest that illegal digging would stop if artifacts were sold in the open market. But the demand for the clandestine product would be substantially reduced. Who would want an unmarked pot, when another was available, whose provenance was known and that was dated stratigraphically by the professional archeologist, who excavated it?
