Answer the questions based on the following passage.

Although technology is finally being integrated into education, its use for teaching and learning still remains a challenge. Despite the fact that many schools today are privileged to have ready access to technology, trained teachers, and a favourable policy environment, the use of technology in the classroom is still low.

With that said, the potential of technology to enhance learning cannot be overemphasized. The use of technology is something that started a long time ago for students with special needs. For example, brail machines have been utilized for the visually impaired. In addition, special needs programs that help children with autism use technology to enhance learning. By integrating technology into education, educators aim to engender pedagogical change and address fundamental issues that affect learners with special needs.

Today, technologies used to improve and facilitate learning can be found everywhere. Leaving other contextual factors to the side – such as unequal access to technological innovations and connected technologies across schools and districts – we can only say that we have embraced technology in education when it is used for both teaching and learning. With the incorporation of technology into schools, the main purpose is to change how teachers and students gather, access, analyse, present and transmit information.

Overall, technology is central to many sectors of society and its integration into the education process has great promise for student learning. With technology, one can expect increased efficiency and effectiveness on both the part of teachers and students. Technology can also prompt pedagogical change and address issues that affect learning, teaching and social organization. Technology can therefore be seen as both a tool and a catalyst for change. Students should embrace technology for them to benefit and teachers should be open to introducing technology into the classroom to improve and innovate their teaching practice.
