 - 3. who
 - 4. what

Question ID : 8161615505

Status : Answered

Chosen Option : 2

Comprehension:

Read the following passage and answer the questions given after it.

Since September, at least 25 people have died and thousands have been made homeless. Every state and territory in Australia has experienced fires this summer. But the biggest fires burn along stretches of the eastern and southern coast, where most of the population lives. This includes areas around Sydney and Adelaide. More than 6.3 million hectares (63,000 sq km or 15.6 million acres) have been burned so far – one hectare is roughly the size of a sports field. To put that in perspective, around 800,000 hectares were engulfed in a bush fire in 2018 in California. Australia has always experienced bushfires – it has a "fire season". But this year they are a lot worse than normal. Fires are usually caused by lightning strikes or accidentally by a spark – but some fires are also started deliberately. This year, a natural weather phenomenon known as the 'Indian Ocean Dipole' has meant a hot, dry spell across the country. This year, Australia twice set a new temperature record: an average maximum of 41.9°C was recorded on 18 December. That comes on top of a long period of drought. Scientists have long warned that this hotter, drier climate will contribute to fires becoming more frequent and more intense. The more extreme weather patterns and higher temperatures increase the risk of bushfires and allow them to spread faster and wider. Fire fighters are spraying water and fire retardant from planes and helicopters as well as from the ground. But fighting bush fires is extremely difficult and often authorities have to focus on just stopping the spread, rather than putting the fire out. The spread can for instance be best contained by digging earth boundaries to stop the flames from spreading. The priority is saving lives. Professional fire fighters are the first in line to battle the flames, but they are outnumbered by the thousands of volunteers. Three of them have died. There's also help coming from abroad: the US, Canada and New Zealand have sent fire fighters to help. Australia's police, military and navy are involved in rescue and evacuation efforts. While people can flee the fires and are being evacuated if need be, the flames are devastating wildlife in the affected areas. One study estimated that half a billion animals have died in New South Wales alone. Zookeepers take animals home to save them from fire, but the fires don't only kill animals directly, they also destroy the habitat, leaving the survivors vulnerable even when the fires have gone. So the true scale of loss isn't yet clear. Experts say more than 100,000 cows and sheep may also have been lost, which is devastating for farmers. Each state runs its own emergency operation, but Prime Minister Scott Morrison has promised better funding for fire-fighting and payouts for volunteer fire fighters, and an additional A\$2billion (\$1.4billion; £1billion) for the recovery. But the national government has come under strong criticism from its opponents that it has not been doing enough against climate change. The country is one of the world's biggest per capita greenhouse gas emitters but under international agreements it has committed itself to reduction targets.

SubQuestion No : 26

Q.26 "Authorities have to focus on just stopping the spread, rather than putting the fire out." This means that the authorities:

- Ans**
- 1. want only to slow down the spread of fire
 - 2. do not want to put the fires out
 - 3. want to stop the fires from spreading first and then put them out
 - 4. want to put out the fires once and for all

But fighting bush fires is extremely difficult and often authorities have to focus on just stopping the spread, rather than putting the fire out. The spread can for instance be best contained by digging earth boundaries to stop the flames from spreading. The priority is saving lives. Professional fire fighters are the first in line to battle the flames, but they are outnumbered by the thousands of volunteers. Three of them have died. There's also help coming from abroad: the US, Canada and New Zealand have sent fire fighters to help. Australia's police, military and navy are involved in rescue and evacuation efforts. While people can flee the fires and are being evacuated if need be, the flames are devastating wildlife in the affected areas. One study estimated that half a billion animals have died in New South Wales alone. Zookeepers take animals home to save them from fire, but the fires don't only kill animals directly, they also destroy the habitat, leaving the survivors vulnerable even when the fires have gone. So the true scale of loss isn't yet clear. Experts say more than 100,000 cows and sheep may also have been lost, which is devastating for farmers. Each state runs its own emergency operation, but Prime Minister Scott Morrison has promised better funding for fire-fighting and payouts for volunteer fire fighters, and an additional A\$2billion (\$1.4billion; £1billion) for the recovery. But the national government has come under strong criticism from its opponents that it has not been doing enough against climate change. The country is one of the world's biggest per capita greenhouse gas emitters but under international agreements it has committed itself to reduction targets.

SubQuestion No : 27

Q.27 What is the long lasting damage that the bush fires have caused to the wildlife in Australia?

- Ans**
- 1. The fires have not only killed animals directly, but also destroyed their habitat.
 - 2. Many animals in the zoos have been killed.
 - 3. Half a billion animals have died in New South Wales alone.
 - 4. More than 100,000 cows and sheep may have been lost.

Question ID : 8161615513

Status : Answered

Chosen Option : 1

Comprehension:

Read the following passage and answer the questions given after it.

Since September, at least 25 people have died and thousands have been made homeless. Every state and territory in Australia has experienced fires this summer. But the biggest fires burn along stretches of the eastern and southern coast, where most of the population lives. This includes areas around Sydney and Adelaide. More than 6.3 million hectares (63,000 sq km or 15.6 million acres) have been burned so far – one hectare is roughly the size of a sports field. To put that in perspective, around 800,000 hectares were engulfed in a bush fire in 2018 in California. Australia has always experienced bushfires – it has a "fire season". But this year they are a lot worse than normal. Fires are usually caused by lightning strikes or accidentally by a spark – but some fires are also started deliberately. This year, a natural weather phenomenon known as the 'Indian Ocean Dipole' has meant a hot, dry spell across the country. This year, Australia twice set a new temperature record: an average maximum of 41.9°C was recorded on 18 December. That comes on top of a long period of drought. Scientists have long warned that this hotter, drier climate will contribute to fires becoming more frequent and more intense. The more extreme weather patterns and higher temperatures increase the risk of bushfires and allow them to spread faster and wider. Fire fighters are spraying water and fire retardant from planes and helicopters as well as from the ground. But fighting bush fires is extremely difficult and often authorities have to focus on just stopping the spread, rather than putting the fire out. The spread can for instance be best contained by digging earth boundaries to stop the flames from spreading. The priority is saving lives. Professional fire fighters are the first in line to battle the flames, but they are outnumbered by the thousands of volunteers. Three of them have died. SubQuestion No : 35

Q.35 Where did the biggest fires burn in Australia?

- Ans
- 1. Along the western and southern coasts
 - 2. Along the eastern and northern coasts
 - 3. Along the western and northern coasts
 - 4. Along the eastern and southern coasts

Question ID : 8161615508

Status : Answered

Chosen Option : 4

Comprehension:

Read the following passage and answer the questions given after it.

The Celts who lived in Britain before the Roman invasion of 43 AD could be said to have created the first towns. Celts in southern England lived in hill forts, which were quite large settlements. (Some probably had thousands of inhabitants). They were places of trade, where people bought and sold goods and also places where craftsmen worked. The Romans called them oppida.

However, the Romans created the first settlements that were undoubtedly towns. Roman towns were usually laid out in a grid pattern. In the centre was the forum or market place. It was lined with public buildings. Life in Roman towns was highly civilized with public baths and temples.

From the 5th century Angles, Saxons and Jutes invaded England. At first, the invaders avoided living in towns. However, as trade grew some towns grew up. London revived by the 7th century (although the Saxon town was, at first, outside the walls of the old Roman town). Southampton was founded at the end of the 7th century. Hereford was founded in the 8th century. Furthermore, Ipswich grew up in the 8th century and York revived.

However, towns were rare in Saxon England until the late 9th century. At that time, Alfred the Great created a network of fortified settlements across his kingdom called 'burhs'. In the event of a Danish attack, men could gather in the local burh. However, burhs were more than forts. They were also market towns. Some burhs were started from scratch but many were created out of the ruins of old Roman towns. Places like Winchester rose, phoenix-like, from the ashes of history.

The thing that would strike us most about medieval towns would be their small size.

Winchester, the capital of England, probably had about 8,000 people. At that time a 'large' town, like Lincoln or Dublin had about 4,000 or 5,000 inhabitants and a 'medium sized' town, like Colchester had about 2,500 people. Many towns were much smaller.

However, during the 12th and 13th centuries most towns grew much larger. Furthermore, many new towns were created across Britain. Trade and commerce were increasing and there was a need for new towns. Some were created from existing villages but some were created from scratch. In those days you could create a town simply by starting a market.

There were few shops so if you wished to buy or sell anything you had to go to a market.

Once one was up and running, craftsmen and merchants would come to live in the area and a town would grow.

SubQuestion No : 36

Q.36 Match the words with their meaning.

- a. founded 1. protected
b. declined 2. created
c. fortified 3. dwindled

- Ans**
- 1. a-1, b-3, c-2
 - 2. a-2, b-3, c-1
 - 3. a-3, b-2, c-1
 - 4. a-2, b-1, c-3

Some burhs were started from scratch but many were created out of the ruins of old Roman towns. Places like Winchester rose, phoenix-like, from the ashes of history.

The thing that would strike us most about medieval towns would be their small size.

Winchester, the capital of England, probably had about 8,000 people. At that time a 'large' town, like Lincoln or Dublin had about 4,000 or 5,000 inhabitants and a 'medium sized' town, like Colchester had about 2,500 people. Many towns were much smaller.

However, during the 12th and 13th centuries most towns grew much larger. Furthermore, many new towns were created across Britain. Trade and commerce were increasing and there was a need for new towns. Some were created from existing villages but some were created from scratch. In those days you could create a town simply by starting a market.

There were few shops so if you wished to buy or sell anything you had to go to a market.

Once one was up and running, craftsmen and merchants would come to live in the area and a town would grow.

SubQuestion No : 37

Q.37 Alfred the Great created fortified settlements across his kingdom mainly because:

- Ans
- 1. people could live there
 - 2. they provided shelter from Danish attacks
 - 3. merchants could come and sell their goods there
 - 4. craftsmen could craft their artefacts there

Question ID : 8161615523

Status : Answered

Chosen Option : 2

Comprehension:

Read the following passage and answer the questions given after it.

The Celts who lived in Britain before the Roman invasion of 43 AD could be said to have created the first towns. Celts in southern England lived in hill forts, which were quite large settlements. (Some probably had thousands of inhabitants). They were places of trade, where people bought and sold goods and also places where craftsmen worked. The Romans called them oppida.

However, the Romans created the first settlements that were undoubtedly towns. Roman towns were usually laid out in a grid pattern. In the centre was the forum or market place. It was lined with public buildings. Life in Roman towns was highly civilized with public baths and temples.

From the 5th century Angles, Saxons and Jutes invaded England. At first, the invaders avoided living in towns. However, as trade grew some towns grew up. London revived by the 7th century (although the Saxon town was, at first, outside the walls of the old Roman town). Southampton was founded at the end of the 7th century. Hereford was founded in the 8th century. Furthermore, Ipswich grew up in the 8th century and York revived.

However, towns were rare in Saxon England until the late 9th century. At that time, Alfred the Great created a network of fortified settlements across his kingdom called 'burhs'. In the event of a Danish attack, men could gather in the local burh. However, burhs were more than forts. They were also market towns. Some burhs were started from scratch but many were created out of the ruins of old Roman towns. Places like Winchester rose, phoenix-like, from the ashes of history.

The thing that would strike us most about medieval towns would be their small size.

Winchester, the capital of England, probably had about 8,000 people. At that time a 'large' town, like Lincoln or Dublin had about 4,000 or 5,000 inhabitants and a 'medium sized' town, like Colchester had about 2,500 people. Many towns were much smaller.

Question ID : 8161615518

Status : Answered

Chosen Option : 4

Comprehension:

Read the following passage and answer the questions given after it.

The giraffe is the tallest land mammal alive, its long legs and neck contributing to its impressive stature. Males can be up to 18ft (5.5m tall), females a little less.

In the wild, these beautiful creatures stretch their necks beyond those of antelope, kudu and even elephants to strip leaves from the untouched upper reaches of trees.

The French zoologist Jean-Baptiste Lamarck is usually credited as the first person to suggest that long necks have evolved in giraffes because they allow them to get to the parts other herbivores cannot reach.

As the giraffe lives "in places where the soil is nearly always arid and barren, it is obliged to browse on the leaves of trees and to make constant efforts to reach them," he wrote in his 1809 book 'Philosophie Zoologique'. "From this habit long maintained in all its race, it has resulted that the animal's fore-legs have become longer than its hind legs, and that its neck is lengthened."

The English naturalist Charles Darwin also thought the giraffe's extraordinary legs and neck must have something to do with foraging. "The giraffe, by its lofty stature, much elongated neck, fore-legs, head and tongue, has its whole frame beautifully adapted for browsing on the higher branches of trees," he wrote in 'On the Origin of Species' in 1859.

In short, giraffes' long necks are the result of generation upon generation of repeated stretching and inheritance.

During the dry season when feeding competition should be most intense giraffe generally feed from low shrubs, not tall trees. What's more, giraffes feed most often and faster with their necks bent.

Male giraffes often fight for access to females, a ritual referred to as "necking". The rivals stand flank to flank, then start to whack each other with their heads. The top or back of the well-armoured skull is used as a club to strike the neck, chest, ribs, or legs of the opponent with a force capable of knocking a competitor off balance or unconscious.

The largest males usually win these battles and do most of the breeding, says zoologist Anne Innis Dagg of the University of Waterloo in Ontario, Canada, who has been studying giraffes since the 1950s. "The other giraffes don't get much breeding opportunity."

There is also evidence that females are more receptive to advances from larger males.

SubQuestion No : 46

Q.46 Match the words with their meanings.

- a. forage 1. hit
b. stretch 2. search
c. whack 3. draw out

"From this habit long maintained in all its race, it has resulted that the animal's fore-legs have become longer than its hind legs, and that its neck is lengthened." The English naturalist Charles Darwin also thought the giraffe's extraordinary legs and neck must have something to do with foraging. "The giraffe, by its lofty stature, much elongated neck, fore-legs, head and tongue, has its whole frame beautifully adapted for browsing on the higher branches of trees," he wrote in 'On the Origin of Species' in 1859. In short, giraffes' long necks are the result of generation upon generation of repeated stretching and inheritance. During the dry season when feeding competition should be most intense giraffe generally feed from low shrubs, not tall trees. What's more, giraffes feed most often and faster with their necks bent. Male giraffes often fight for access to females, a ritual referred to as "necking". The rivals stand flank to flank, then start to whack each other with their heads. The top or back of the well-armoured skull is used as a club to strike the neck, chest, ribs, or legs of the opponent with a force capable of knocking a competitor off balance or unconscious. The largest males usually win these battles and do most of the breeding, says zoologist Anne Innis Dagg of the University of Waterloo in Ontario, Canada, who has been studying giraffes since the 1950s. "The other giraffes don't get much breeding opportunity." There is also evidence that females are more receptive to advances from larger males.

SubQuestion No : 49

Q.49 According to the passage, 'necking' is the:

- Ans
- 1. repeated stretching of the neck
 - 2. elongation of the giraffes' neck
 - 3. breeding by the largest males
 - 4. fight to woo the females

Question ID : 8161615529

Status : Answered

Chosen Option : 4

Comprehension:

Read the following passage and answer the questions given after it.

The giraffe is the tallest land mammal alive, its long legs and neck contributing to its impressive stature. Males can be up to 18ft (5.5m tall), females a little less. In the wild, these beautiful creatures stretch their necks beyond those of antelope, kudu and even elephants to strip leaves from the untouched upper reaches of trees. The French zoologist Jean-Baptiste Lamarck is usually credited as the first person to suggest that long necks have evolved in giraffes because they allow them to get to the parts other herbivores cannot reach. As the giraffe lives "in places where the soil is nearly always arid and barren, it is obliged to browse on the leaves of trees and to make constant efforts to reach them," he wrote in his 1809 book 'Philosophie Zoologique'. "From this habit long maintained in all its race, it has resulted that the animal's fore-legs have become longer than its hind legs, and that its neck is lengthened." The English naturalist Charles Darwin also thought the giraffe's extraordinary legs and neck must have something to do with foraging. "The giraffe, by its lofty stature, much elongated neck, fore-legs, head and tongue, has its whole frame beautifully adapted for browsing on the higher branches of trees," he wrote in 'On the Origin of Species' in 1859. In short, giraffes' long necks are the result of generation upon generation of repeated stretching and inheritance. During the dry season when feeding competition should be most intense giraffe generally feed from low shrubs, not tall trees. What's more, giraffes feed most often and faster with their necks bent. Male giraffes often fight for access to females, a ritual referred to as "necking". The rivals stand flank to flank, then start to whack each other with their heads. The top or back of the well-armoured skull is used as a club to strike the neck, chest, ribs, or legs of the opponent with a force capable of knocking a competitor off balance or unconscious. The largest males usually win these battles and do most of the breeding, says zoologist Anne Innis Dagg of the University of Waterloo in Ontario, Canada, who has been studying giraffes since the 1950s. "The other giraffes don't get much breeding opportunity." There is also evidence that females are more receptive to advances from larger males.

SubQuestion No : 50

Q.50 How does a giraffe knock its opponent off balance or unconscious?

- Ans
- 1. By pulling the legs of the opponent
 - 2. By using its head as a club and hitting the opponent
 - 3. By biting the opponent's neck, chest and ribs
 - 4. By entangling its neck in the opponent's neck

Question ID : 8161615532

Status : Answered

Chosen Option : 2

Comprehension:

Read the following passage and answer the questions given after it.

The stark observation made in the Economic Survey of 2015-16 that "Indian agriculture, is in a way, a victim of its own past success – especially the green revolution", shows the dark reality of the agriculture sector at present and the havoc that has been wreaked by the green revolution.

The green revolution, which is often characterised by the introduction of high-yielding variety of seeds and fertilisers, undoubtedly increased the productivity of land considerably. But the growth in the productivity has been stagnant in recent years, resulting in a significant decline in the income of farmers. There have also been negative environmental effects in the form of depleting water table, emission of greenhouse gases, and the contamination of surface and ground water. Needless to say, the agriculture sector is in a state of distress, which is severely affecting peasants and marginal farmers, and urgent policy interventions are required to protect their interests.

The government has responded to the problem by constituting a panel, which will recommend ways to double the income of farmers by 2022. While this may be an overtly ambitious target, if we want to boost stagnated agricultural growth a shift has to be made from food security of the nation to income security of the farmers. However, there are many hurdles that have to be crossed if we want to achieve this objective.

The first major barrier to overcome is declining productivity. Data from 2013 reveals that India's average yield of cereal per hectare is far less than that of many countries (including several low income countries), but the difference is huge when compared to China. For instance, our average yield per hectare is 39% below than that of China and for rice this figure is 46%. Even Bangladesh, Vietnam and Indonesia fare better than India in case of rice yield. Further, there is a huge inter-regional variation; the wheat and rice yield from Haryana and Punjab is much higher than from the other states.

In order to cross the declining productivity barrier there is a need to herald a rainbow revolution by making a shift from wheat-rice cycle to other cereals and pulses. Since wheat and rice coupled with other crops are backed by minimum support prices (MSP) and input subsidy (whether water, fertiliser or power) regime, there is a huge incentive for the farmers in the irrigated region of Northwest India to grow these crops.

SubQuestion No : 51

Q.51 As per the passage, which country has the highest yield of rice per hectare?

- Ans
- 1. Vietnam
 - 2. Bangladesh
 - 3. China
 - 4. Indonesia
